

Application Flow :

- NewUser Logs in with his Username.
- The user is prompted to do the diagnostic test.
- The information we get from the diagnostic test is used to categorize the information into easy medium and hard questions based on the accuracy of the user.
- The user can then analyze the questions he has attempted so far.
- They can see the time taken for each question, the total number of right and wrong questions, their weak and strong areas in terms of chapters, their weak medium, and strong areas based on the sub-topics of the chapters.
- The user is able to take a practice test in which he is able to select the number of questions and the level (easy | medium | hard) of the paper they are going to take.
- After the user is done answering the questions they are then provided with the questions they have answered wrong along with the right answer, explanation, and relevant links that have been ranked using cosine similarity to help better understand the topic.
- To run the application the user would have to import the code and run the command ***py -m streamlit run app.py***
